- Slim compact design
- Learn features on power-up
- Full safety features
- Inward or outward opening
- Built in battery back up
- Compatible with other door access systems
- Opens doors up to 100Kgs in weight

The Sprint powered door opener is of invaluable help to elderly or disabled persons who find it difficult to open and close their front doors. This often means that unless someone is available to open and close the door, visits to friends or shopping trips are out of the question. The Sprint opener allows access to and from a home at any time as it effortlessly powers open the door and closes it.

By using the LOCCA radio key fob the door can be powered open from inside and outside the house. When the Locca keyfob is pressed the door automatically unlocks itself and the powered door opener fully opens the door. The door then 'parks' itself in the opened position for a preset time of between 5 to 30 seconds. After this time the door automatically closes and locks itself.

The Sprint comes with safety features on the opening and closing cycles. If an obstruction is encountered the opener stops and reverses direction.

The door opener can be fitted to timber, aluminium and PVCu doors. A battery back-up is included so the Sprint will operate in the event of mains failure.

All our powered door openers come with a full 12 month warranty. A full maintenance service is available after the first 12 months. Please contact us for details.
