

SEE AND SPEAK TO THE CALLER AT THE DOOR

MONITOR

This hands free door entry system allows the user to see and speak to the caller at the door. When the caller presses the call button at the door unit, the monitor emits a call tone (Ding Dong) and the monitor screen becomes live showing the caller at the door without them knowing. To speak to the caller the user presses the 'TALK' button. Speech can either be hands free as shown opposite or the monitor includes a telephone handset.. If the caller is welcome the 'OPEN' button is pressed and the lock release is activated allowing the door to be pushed open.

The view at the door can be called-up at any time by pressing 'DOOR' button. If the button is pressed again the monitor switches itself off.

The monitor image is black and white. The camera in the door unit is surrounded by infra red LED's. This means that the camera provides a clear image even when there is very low levels of illumination at night.

Main features

- Hands free speech
- 100mm black and white monitor display
- Operates at very low light levels
- Automatic monitor switch off after 90 seconds
- Volume and brightness adjustment on monitor
- Camera angle can be adjusted
- Power supply 17 Volts DC
